## Fields

### offset

```
public Vector3 offset
```

Field Value

Vector3

### smoothTime

```
public float smoothTime
```

Field Value

[float](#)

### target

```
public Transform target
```

Field Value

Transform

# Namespace Entities

## Classes

### [Entity](#)

Represents an abstract entity that can be moved and can attack. Requires a `UnityEngine.SpriteRenderer`, `UnityEngine.U2D.Animation.SpriteLibrary`, `UnityEngine.Animator`, and `UnityEngine.Rigidbody2D` components.

### [Health](#)

Manages the health of an object. Can take damage and die.

### [Movement](#)

Reacts to input and moves the object accordingly. Has to be attached to an object with an [Entity](#) component.

## Enums

### [Direction](#)

Represents the direction of an object.

# Enum Direction

Namespace: [Entities](#)

Assembly: Assembly-CSharp.dll

Represents the direction of an object.

```
public enum Direction
```

## Fields

Down = 0

Left = 2

Right = 3

Up = 1

# Class Entity

Namespace: [Entities](#)

Assembly: Assembly-CSharp.dll

Represents an abstract entity that can be moved and can attack. Requires a UnityEngine.SpriteRenderer, UnityEngine.U2D.Animation.SpriteLibrary, UnityEngine.Animator, and UnityEngine.Rigidbody2D components.

```
[RequireComponent(typeof(SpriteRenderer))]  
[RequireComponent(typeof(SpriteLibrary))]  
[RequireComponent(typeof(Animator))]  
[RequireComponent(typeof(Rigidbody2D))]  
public abstract class Entity : MonoBehaviour, ICanAttack
```

## Fields

### anim

`protected Animator anim`

### Field Value

Animator

### dir

The direction the entity is facing.

[HideInInspector]

```
public Direction dir
```

Field Value

[Direction](#)

## health

```
protected Health health
```

Field Value

[Health](#)

## isDashing

Whether the entity is dashing.

```
[HideInInspector]  
public bool isDashing
```

Field Value

[bool](#)

## isMoving

Whether the entity is moving.

```
[HideInInspector]  
public bool isMoving
```

Field Value

[bool](#)

## netId

The network ID (UUID) of the entity.

```
[HideInInspector]  
public string netId
```

Field Value

[string](#) 

## nextInstantMove

The position to instantly move to in the next fixed update. If null, the position will not be changed.

```
protected Vector2? nextInstantMove
```

Field Value

Vector2?

## nextVel

The velocity to change to in the next fixed update. If null, the velocity will not be changed.

```
protected Vector2? nextVel
```

Field Value

Vector2?

## rb

```
protected Rigidbody2D rb
```

Field Value

Rigidbody2D

## score

The score of the entity.

```
public int score
```

Field Value

[int](#)

## sprite

```
protected SpriteRenderer sprite
```

Field Value

SpriteRenderer

## spriteLib

```
protected SpriteLibrary spriteLib
```

Field Value

SpriteLibrary

## spriteLibraries

The sprite libraries for each direction. The order is the same as the [Direction](#) enum

- Down, Up, Left, Right.

```
public SpriteLibraryAsset[] spriteLibraries
```

## Field Value

SpriteLibraryAsset[]

## Methods

### Attack()

Make the entity attack.

```
public void Attack()
```

### FixedUpdate()

```
protected virtual void FixedUpdate()
```

### MoveToOverTime(Vector2, float)

```
public void MoveToOverTime(Vector2 to, float time)
```

## Parameters

**to** Vector2

**time** [float](#)

### OnAttackAnimationHit()

Animation event that is triggered when the attack animation hits.

```
public void OnAttackAnimationHit()
```

## OnDamage()

Called when the entity takes damage.

```
public abstract void OnDamage()
```

## OnDeath()

Called when the entity dies.

```
public void OnDeath()
```

## OnDeathFinished()

Animation event that is triggered when the death animation finishes.

```
public void OnDeathFinished()
```

## Events

### onAttackHit

Event that is triggered when the entity's attack actually hits.

```
public event Action onAttackHit
```

### Event Type

[Action](#)

# Class Health

Namespace: [Entities](#)

Assembly: Assembly-CSharp.dll

Manages the health of an object. Can take damage and die.

```
public class Health : MonoBehaviour
```

## Inheritance

## Fields

### health

The current health of the object.

```
public float health
```

#### Field Value

[float](#)

### maxHealth

The maximum health of the object.

```
public float maxHealth
```

#### Field Value

[float](#)

### onDamage

Event that is triggered when the object takes damage.

`public Action onDamage`

Field Value

[Action](#)

## onDeath

Event that is triggered when the object dies.

`public Action onDeath`

Field Value

[Action](#)

## Properties

### Alive

Property that returns whether the object is alive.

```
public bool Alive { get; }
```

Property Value

[bool](#)

True if the object is alive, false otherwise.

## Methods

### Kill()

Kills the object.

```
public void Kill()
```

## SetHealth(float)

Sets the health of the object. Ignores the maximum health. Doesn't trigger the onDamage event even if the new health is lower than the current health. Does trigger the onDeath event though if the new health is 0 or lower.

```
public void SetHealth(float newHealth)
```

### Parameters

**newHealth** [float](#) 

The new health of the object.

## TakeDamage(float)

Makes the object take damage.

```
public void TakeDamage(float damage)
```

### Parameters

**damage** [float](#) 

The amount of damage to take.

# Class Movement

Namespace: [Entities](#)

Assembly: Assembly-CSharp.dll

Reacts to input and moves the object accordingly. Has to be attached to an object with an [Entity](#) component.

```
[RequireComponent(typeof(Entity))]  
public class Movement : MonoBehaviour
```

## Inheritance

## Fields

### dashSpeed

The speed of dashing in m/s.

```
public float dashSpeed
```

#### Field Value

[float](#)

### speed

The speed of movement in m/s.

```
public float speed
```

#### Field Value

[float](#)

# Namespace Entities.Player

## Classes

### [Player](#)

Represents the player entity. Requires a [Health](#) component.

### [PlayerAttack](#)

Reacts to input and attacks. Requires a [Player](#) component.

### [PlayerUpdater](#)

Sends updates regarding the player to the server. Requires a [Player](#) and a [PlayerAttack](#) component.

# Class Player

Namespace: [Entities.Player](#)

Assembly: Assembly-CSharp.dll

Represents the player entity. Requires a [Health](#) component.

```
[RequireComponent(typeof(Health))]  
public class Player : Entity, ICanAttack
```

## Inheritance

[object](#)  < Object < Component < Behaviour < MonoBehaviour < [Entity](#) < Player

## Implements

[ICanAttack](#)

## Inherited Members

## Fields

### hurtColor

The color to blink when the player takes damage.

```
public Color hurtColor
```

### Field Value

Color

## Methods

### OnDamage()

Called when the entity takes damage.

```
public override void OnDamage()
```

# Class PlayerAttack

Namespace: [Entities.Player](#)

Assembly: Assembly-CSharp.dll

Reacts to input and attacks. Requires a [Player](#) component.

```
[RequireComponent(typeof(Player))]  
public class PlayerAttack : MonoBehaviour
```

## Fields

### attackCooldown

The cooldown between attacks in seconds.

```
public float attackCooldown
```

Field Value

[float](#)

### attackPoints

The three points where the attack colliders are placed. The order is: Down, Up, Side. The side is determined by the Player.dir and rotates with the player.

```
public Transform[] attackPoints
```

Field Value

Transform[]

### attackRange

The range of the attack in meters.

```
public float attackRange
```

Field Value

[float](#)

## attackableLayers

The layers that can be attacked.

```
public LayerMask attackableLayers
```

Field Value

LayerMask

## onAttack

Event that is triggered when the player starts an attack.

```
public Action onAttack
```

Field Value

[Action](#)

## onHit

Event that is triggered when the player hits an entity with an attack. The entity hit is passed as an argument.

```
public Action<Entity> onHit
```

Field Value

[Action](#) <[Entity](#)>

# Class PlayerUpdater

Namespace: [Entities.Player](#)

Assembly: Assembly-CSharp.dll

Sends updates regarding the player to the server. Requires a [Player](#) and a [PlayerAttack](#) component.

```
[RequireComponent(typeof(Player))]  
[RequireComponent(typeof(PlayerAttack))]  
public class PlayerUpdater : MonoBehaviour
```

## Methods

### OnDamage()

Called when the entity takes damage.

```
public override void OnDamage()
```

# Namespace Interfaces

## Interfaces

### [ICanAttack](#)

Represents an object that can attack.

# Interface ICanAttack

Namespace: [Interfaces](#)

Assembly: Assembly-CSharp.dll

Represents an object that can attack.

```
public interface ICanAttack
```

## Methods

### Attack()

Do the attack.

```
void Attack()
```

## Events

### onAttackHit

Event that is triggered when the attack actually hits (eg. the animation hits the target).

```
event Action onAttackHit
```

### Event Type

[Action](#)

# Namespace UI

## Classes

### [HUD](#)

Manages the HUD that displays the player's score.

### [MainMenu](#)

Manages the main menu.

# Class HUD

Namespace: [UI](#)

Assembly: Assembly-CSharp.dll

Manages the HUD that displays the player's score.

```
public class HUD : MonoBehaviour
```

## Inheritance

## Fields

### ServerAddress

The WebSocket server address that will be used by [Connect\(\)](#). Changing this value will not affect the current connection.

```
public string ServerAddress
```

### Field Value

[string](#)

## Properties

### Connected

Returns whether the WebSocket connection is open.

```
public bool Connected { get; }
```

### Property Value

[bool](#) 

True if the connection is open, false otherwise.

## State

Exposes the WebSocket connection state.

```
public WebSocketState State { get; }
```

## Property Value

WebSocketState

The current NativeWebSocket.WebSocketState of the connection.

## Methods

### CloseConnection()

Closes the WebSocket connection.

```
public void CloseConnection()
```

### Connect()

Connects to the WebSocket server. Uses the value from [ServerAddress](#). If a connection is already open, it will be closed.

```
public void Connect()
```

### SendWSMessage(string, object)

Sends a message to the server.

```
public void SendWSMessage(string eventName, object data)
```

## Parameters

eventName [string](#)

The event name.

data [object](#)

The event data.

## bindHandler(string, Action<string>)

Binds a handler to an event.

```
public void bindHandler(string @event, Action<string> handler)
```

## Parameters

event [string](#)

The event name.

handler [Action](#)<[string](#)>

The handler.

# Namespace WebSockets.InMessageData

## Classes

### [EntityAttackData](#)

Represents the entity attack message data.

This message is sent by the server when an entity attacks (the attack animation starts).

### [EntityDamageData](#)

Represents the entity damage message data. This message is sent by the server when an entity takes damage.

### [EntityDespawnData](#)

Represents the entity despawn message data.

### [EntityMoveData](#)

Represents the entity move message data.

### [EntitySpawnData](#)

Represents the entity spawn message data.

### [EntityUpdateData](#)

Represents the entity update message data.

### [HeartbeatData](#)

Represents the heartbeat message data.

### [JoinData](#)

Represents the player join message data.

### [LeaveData](#)

Represents the player leave message data.

### [MessageData](#)

Represents abstract incoming message data.

### [PositionedMessageData](#)

Represents incoming message data that contains a position.

## Enums

### [EntityType](#)

Represents the type of entity. The order of the enum values determines the order in the inspector field.

# Class EntityAttackData

Namespace: [WebSockets.InMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the entity attack message data.

This message is sent by the server when an entity attacks (the attack animation starts).

```
public sealed class EntityAttackData : MessageData
```

## Inheritance

[object](#)  ← [MessageData](#) ← EntityAttackData

## Inherited Members

[object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  , [object.GetType\(\)](#)  ,  
[object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

## Properties

### time

```
public float time { get; set; }
```

### Property Value

[float](#) 

# Class EntitySpawnData

Namespace: [WebSockets.InMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the entity spawn message data.

```
public sealed class EntitySpawnData : PositionedMessageData
```

## Inheritance

[object](#)  < [MessageData](#) < [PositionedMessageData](#) < EntitySpawnData

## Inherited Members

[PositionedMessageData.x](#) , [PositionedMessageData.y](#) , [MessageData.id](#) , [object.Equals\(object\)](#)  ,  
[object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  , [object.GetType\(\)](#)  ,  
[object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

## Properties

entity

```
public EntityType entity { get; set; }
```

Property Value

[EntityType](#)

# Enum EntityType

Namespace: [WebSockets.InMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the type of entity. The order of the enum values determines the order in the inspector field.

```
public enum EntityType
```

## Fields

```
Player = 0
```

```
Slime = 1
```

```
SlimePurple = 2
```

# Class EntityUpdateData

Namespace: [WebSockets.InMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the entity update message data.

```
public sealed class EntityUpdateData : MessageData
```

## Inheritance

[object](#)  < [MessageData](#) < EntityUpdateData

## Inherited Members

[MessageData.id](#) , [object.Equals\(object\)](#)  , [object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  , [object.GetType\(\)](#)  , [object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

## Properties

dir

```
public Direction dir { get; set; }
```

Property Value

[Direction](#)

hp

```
public float hp { get; set; }
```

Property Value

[float](#)

Property Value

# Namespace WebSockets.OutMessageData

## Classes

### [AttackData](#)

Represents the player attack message data. It is used to report the player's attack (the animation) to the server.

### [HeartbeatData](#)

Represents the heartbeat message data.

### [HitData](#)

Represents the player hit message data. It is used to report the player's hit to the server. Each hit message reports one hit.

### [JoinData](#)

Represents the player join message data. This is sent when the client wants to register the new player with the server.

### [LeaveData](#)

Represents the player leave message data. This is sent when the client wants to leave the server.

### [MessageData](#)

Represents abstract outgoing message data.

### [MoveData](#)

Represents the player move message data. It is used to report the player's movement to the server.

### [SpawnData](#)

Represents the player spawn message data. This is sent when the client wants to spawn the player.

### [UpdateData](#)

Represents the player update message data. It is used to report the current state of the player to the server.

# Class AttackData

Namespace: [WebSockets.OutMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the player attack message data. It is used to report the player's attack (the animation) to the server.

```
public sealed class AttackData : MessageData
```

## Inheritance

[object](#)  < [MessageData](#) < AttackData

## Inherited Members

[MessageData.id](#) , [object.Equals\(object\)](#)  , [object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  , [object.GetType\(\)](#)  , [object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

# Class HeartbeatData

Namespace: [WebSockets.OutMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the heartbeat message data.

```
public sealed class HeartbeatData : MessageData
```

## Inheritance

[object](#)  < [MessageData](#) < HeartbeatData

## Inherited Members

[MessageData.id](#) , [object.Equals\(object\)](#)  , [object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  ,  
[object.GetType\(\)](#)  , [object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

# Class HitData

Namespace: [WebSockets.OutMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the player hit message data. It is used to report the player's hit to the server. Each hit message reports one hit.

```
public sealed class HitData : MessageData
```

## Inheritance

[object](#) < [MessageData](#) < HitData

## Inherited Members

[MessageData.id](#) , [object.Equals\(object\)](#) , [object.Equals\(object, object\)](#) , [object.GetHashCode\(\)](#) , [object.GetType\(\)](#) , [object.ReferenceEquals\(object, object\)](#) , [object.ToString\(\)](#)

## Properties

### targetId

```
public string targetId { get; set; }
```

### Property Value

[string](#)

# Class JoinData

Namespace: [WebSockets.OutMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the player join message data. This is sent when the client wants to register the new player with the server.

```
public sealed class JoinData
```

## Inheritance

[object](#)  ← JoinData

## Inherited Members

[object.Equals\(object\)](#)  , [object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  ,  
[object.GetType\(\)](#)  , [object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

## Properties

### playerName

```
public string playerName { get; set; }
```

### Property Value

[string](#) 

# Class LeaveData

Namespace: [WebSockets.OutMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the player leave message data. This is sent when the client wants to leave the server.

```
public sealed class LeaveData : MessageData
```

## Inheritance

[object](#)  ← [MessageData](#) ← LeaveData

## Inherited Members

[MessageData.id](#) , [object.Equals\(object\)](#)  , [object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  ,  
[object.GetType\(\)](#)  , [object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

# Class MessageData

Namespace: [WebSockets.OutMessageData](#)

Assembly: Assembly-CSharp.dll

Represents abstract outgoing message data.

```
public abstract class MessageData
```

## Inheritance

[object](#)  ← MessageData

## Derived

[AttackData](#), [HeartbeatData](#), [HitData](#), [LeaveData](#), [MoveData](#), [SpawnData](#), [UpdateData](#)

## Inherited Members

[object.Equals\(object\)](#)  , [object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  ,  
[object.GetType\(\)](#)  , [object.MemberwiseClone\(\)](#)  , [object.ReferenceEquals\(object, object\)](#)  ,  
[object.ToString\(\)](#) 

## Properties

id

```
public string id { get; set; }
```

Property Value

[string](#) 

# Class MoveData

Namespace: [WebSockets.OutMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the player move message data. It is used to report the player's movement to the server.

```
public sealed class MoveData : MessageData
```

## Inheritance

[object](#)  < [MessageData](#) < MoveData

## Inherited Members

[MessageData.id](#) , [object.Equals\(object\)](#)  , [object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  , [object.GetType\(\)](#)  , [object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

# Properties

x

```
public float x { get; set; }
```

Property Value

[float](#) 

y

```
public float y { get; set; }
```

Property Value

[float](#) 

# Class SpawnData

Namespace: [WebSockets.OutMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the player spawn message data. This is sent when the client wants to spawn the player.

```
public sealed class SpawnData : MessageData
```

## Inheritance

[object](#)  ← [MessageData](#) ← SpawnData

## Inherited Members

[MessageData.id](#) , [object.Equals\(object\)](#)  , [object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  ,  
[object.GetType\(\)](#)  , [object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

# Class UpdateData

Namespace: [WebSockets.OutMessageData](#)

Assembly: Assembly-CSharp.dll

Represents the player update message data. It is used to report the current state of the player to the server.

```
public sealed class UpdateData : MessageData
```

## Inheritance

[object](#)  < [MessageData](#) < UpdateData

## Inherited Members

[MessageData.id](#) , [object.Equals\(object\)](#)  , [object.Equals\(object, object\)](#)  , [object.GetHashCode\(\)](#)  , [object.GetType\(\)](#)  , [object.ReferenceEquals\(object, object\)](#)  , [object.ToString\(\)](#) 

# Properties

## dir

```
public Direction dir { get; set; }
```

## Property Value

[Direction](#)

## isDashing

```
public bool isDashing { get; set; }
```

## Property Value

[bool](#) 

# isMoving

```
public bool isMoving { get; set; }
```

## Property Value

[bool](#)
